1. Microbes
2. Typhus
3. Dysentery
4. Typhus and Dysentery are difficult infectious diseases
5. Those infected with typhus and dysentery and those currently receiving treatment are the biggest sources of infection. Microbes – the cause of these diseases, are released in feces (also with urine in cases of typhus) in those infected and getting treatment. Those infected with typhus and dysentery should immediately be admitted to a hospital. The linens, dishes, and other objects used by the infected should be boiled.
6. Wash hands with soap before eating food and after visiting the bathroom
7. After disinfecting, wash the room well with hot water, soap, and soda
8. Preventative vaccinations against typhus and dysentery greatly reduce the danger of infection
